

MVC JavaScript

MVC

Let's build this:

<http://euglazer.github.io/raindrops/>

and let's be organized and sensible about it

HTML

```
<!DOCTYPE html>

<head>
  <link rel="stylesheet" type="text/css" href="../public/stylesheets/index.css">
  <script type="text/javascript" src="../app/models/model.js"></script>
  <script type="text/javascript" src="../app/views/view.js"></script>
  <script type="text/javascript" src="../app/controllers/controller.js"></script>
  <script type="text/javascript" src="../public/javascripts/router.js"></script>
</head>

<body>
  <div></div>
</body>
```

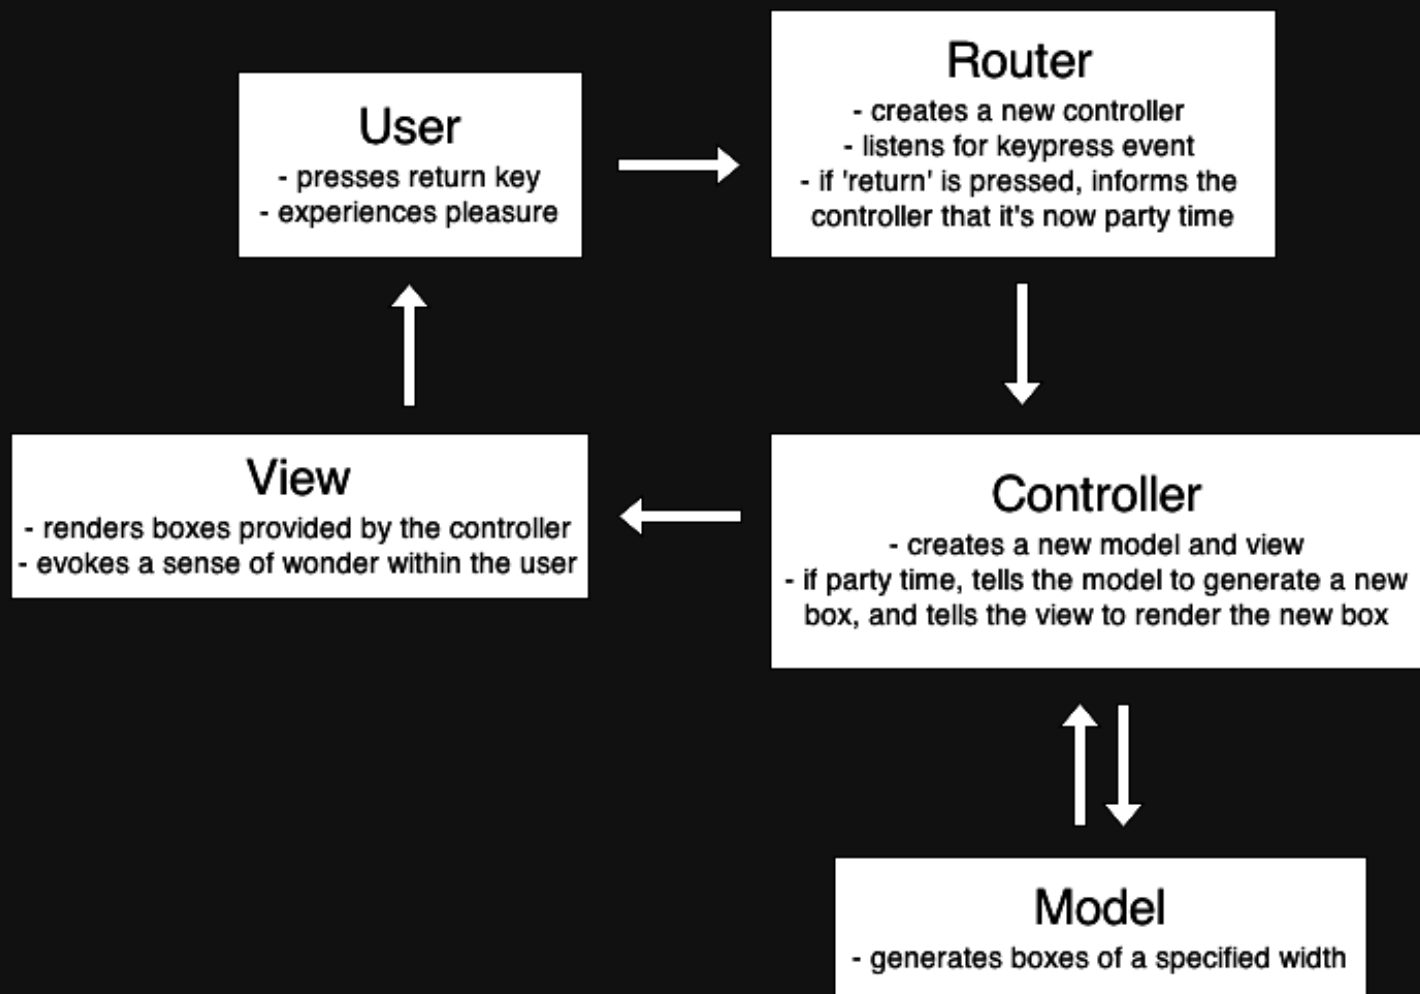

CSS

```
div {
  height: 10px;
  width: 10px;
  border: 25px dashed black;
}
```

```
├── app
│   ├── controllers
│   │   └── controller.js
│   ├── models
│   │   └── model.js
│   └── views
│       └── view.js
├── index.html
└── public
    ├── javascripts
    │   └── router.js
    ├── stylesheets
    │   └── index.css
```

JS

- \ _ (ツ) _ / -

Router

```
function bindListeners() {
    var controller = new Controller();
    document.body.onkeyup = function(e) {
        if(e.keyCode === 13) {
            controller.partyTime();
        }
    }
}

function ready(fn) {
    if (document.readyState !== 'loading'){
        fn();
    } else {
        document.addEventListener('DOMContentLoaded', fn);
    }
};

ready(bindListeners);

/* THE JQUERY WAY
$(document).ready(function() {
    $('body').on('keyup', function(e) {
        var controller = new Controller();
        if(e.keyCode === 13) {
            controller.partyTime();
        }
    });
});
*/
```

Controller

```
function Controller() {

    var view = new View();    // creates new view
    var model = new Model();  // creates new model
    var size = 10;            // size initialized at 10

    var initialize = function() {
        view.clearScreen();
    };

    var stopIfDone = function(interval) {
        if (size > 1500) {
            clearInterval(interval);
        }
    };

    this.partyTime = function() {
        initialize();                // tells view to clear the screen
        var cycle = setInterval(function() { // starts interval
            var newBox = model.generateBox(size); // tells model to generate a box with specific size
            view.addBox(newBox); // tells view to render the box
            view.scrollDown(); // tells the view to scroll downwards
            size += 2; // increments size
            stopIfDone(cycle); // if size too large, stops interval
        }, 15); // interval is repeated every 15 ms
    };
}
```

Controller

```
function Controller() {

  var view = new View();
  var model = new Model();
  var size = 10;

  var initialize = function() {
    view.clearScreen();
  };

  var stopIfDone = function(interval) {
    if (size > 1500) {
      clearInterval(interval);
    }
  };

  this.partyTime = function() {
    initialize();
    var cycle = setInterval(function() {
      var newBox = model.generateBox(size);
      view.addBox(newBox);
      view.scrollDown();
      size += 2;
      stopIfDone(cycle);
    }, 15);
  };
}
```

View

```
function View() {

  var seedBox = document.body.children[0];
  var largestBox = seedBox;

  this.clearScreen = function() {
    seedBox.innerHTML = '';
  };

  this.addBox = function(box) {
    largestBox.appendChild(box);
    largestBox = box;
  };

  this.scrollDown = function() {
    window.scrollTo(document.body.scrollHeight, document.body.scrollHeight);
  };
}
```

Model

```
function Model() {

  this.generateBox = function(size) {
    var div = document.createElement('DIV');
    div.style.height = size + 'px';
    div.style.width = size + 'px';
    return div;
  };
}
```
